Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM
THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 11-30 are rejected under 35 U.S.C. 103(a) as being unpatentable over NAJI et al (6,030,447) with or without HILLSTROM et al (4,138,313).

NAJI et al teaches a composite building material comprising mechanical cellulose fibers refined to a freeness of 0 to 800 CSF which reinforce the product (column 2, lines 7-19, and an aggregate (siliceous material, see abstract), a density modifier (column 2, line 21) and one or more additives (column 2, lines 20-31). The mechanical fibers of NAJI et al would have very low COD's as mechanical pulp is not chemically treated and would not contain residual chemicals from chemical pulping. If necessary, NIJA et al also teaches using chemical pulp. HILLSTROM et al teaches after treating pulp with chemicals to remove the chemicals by counter current washing and further teaches that the counter current washing reduces the pulp to a COD content of less than 5 kg/ton, e.g. Table V shows a COD content of 0.36 g/l. It would have been obvious to the routineer when using the chemical pulp of NAJI et al to wash the pulp to remove the residual chemicals as taught by HILLSTROM et al. Such washing would lower the COD to less than 5 kg/ton as taught by HILLSTROM et al. See NAJI et al, column 1, lines 51-54 for Portland cement; column 2, line 22 for mineral oxides, cdolumn 2, line23 for amorphous silica and silica fulme.
